**LARSON—MATH 610—HOMEWORK h11**  
**Gram-Schmidt Example**

Given any basis  $v_1, \dots, v_n$  of  $\mathbb{R}^n$ , we can *construct* an orthonormal basis  $u_1, \dots, u_n$  of  $\mathbb{R}^n$  (this method applies to any finite-dimensional vector space, but our example will be in  $\mathbb{R}^3$ ).

The method is the following:

1. Let  $u_1 = \frac{1}{\|v_1\|} v_1$ .
2. After  $j$  iterations, let  $u'_{j+1} = v_j - \langle v_j, u_1 \rangle u_1 - \dots - \langle v_j, u_j \rangle u_j$ .
3. Let  $u_{j+1} = \frac{1}{\|u'_{j+1}\|} u'_{j+1}$ .
4. Repeat.

**Problem**

Let  $v_1 = \begin{pmatrix} 1 \\ 2 \\ 0 \end{pmatrix}$ ,  $v_2 = \begin{pmatrix} 2 \\ 1 \\ 0 \end{pmatrix}$ ,  $v_3 = \begin{pmatrix} 1 \\ 1 \\ 1 \end{pmatrix}$ .

1. Check that  $v_1, v_2, v_3$  is a basis for  $\mathbb{R}^3$ .
2. Apply the Gram-Schmidt method to  $v_1, v_2, v_3$  to produce an orthonormal basis  $u_1, u_2, u_3$  for  $\mathbb{R}^3$ . Show all your steps.
3. Check that  $u_1, u_2, u_3$  is an orthonormal basis for  $\mathbb{R}^3$ . What are all the things you need to check?
