LARSON—MATH 550—CLASSROOM WORKSHEET 35
Generating Functions & Convolutions.

Concepts & Notation

- Sec. 5.1: Binomial coefficients, the Binomial Theorem, key formulas, the polynomial argument, Vandermonde's convolution.
- Sec. 5.2: the Sorting example.
- Sec. 5.3: Duplication formula, inversion, derangements.
- Sec. 5.4: Convolutions, generating functions.

Generating Functions

A sequence $\langle a_n \rangle = \langle a_0, a_1, a_2, \dots \rangle$ can be represented as the coefficients of the formal power series,

$$A(z) = a_0 + a_1 z^1 + a_2 z^2 + \dots = \sum_{k \geq 0} a_k z^k,$$

called the *generating function* of the sequence, with notation $a_n = [z^n]A(z)$.

1. Find the generating function $F(z)$ of the sequence $\langle 0, 1, 1, 2, 3, 5 \dots \rangle$, and $[z^n]F(z)$.
2. Find the first few coefficients of $F[x]^2$.
3. Let $B(z)$ be the generating function of the sequence $\langle b_n \rangle = \langle b_0, b_1, b_2, \dots \rangle$. Find the coefficient of z^n in $A(z)B(z)$, that is, find c_n where $c_n = [z^n]A(z)B(z)$.

The sequence $\langle c_n \rangle = \langle c_0, c_1, c_2, \dots \rangle$ is the *convolution* of the sequences $\langle a_n \rangle$ and $\langle b_n \rangle$.

Examples

4. Express $(1 + z)^r$ as a power series (and find the *sequence* corresponding to its coefficients).
5. Now express $(1 + z)^r \cdot (1 + z)^s$ as a power series. What do you notice?
6. Express $(1 - z)^r$ as a power series (and find the *sequence* corresponding to its coefficients).
7. Now express $(1 + z)^r \cdot (1 - z)^r$ as a power series.
8. Express $\frac{1}{(1-z)^{n+1}}$ as a power series.
