**LARSON—MATH 601—CLASSROOM WORKSHEET 12**  
**Linear independence, Bases, Dimension.**

**Concepts & Notation**

- (Sec. 2.1) *vector, vector space, linear combination.*
- (Sec. 2.2) *subspace, subspace spanned by a set of vectors, span.*
- (Sec. 3.3) *linearly dependent/independent set of vectors, basis, dimension.*

Let  $\mathbb{F}$  be a subfield of  $\mathbb{C}$ . Let  $V$  be the set of functions from  $\mathbb{F}$  to  $\mathbb{F}$  of the form

$$f(x) = c_0 + c_1x + c_2x^2 + \dots + c_nx^n$$

(where  $c_i \in \mathbb{F}$  and  $n$  is a non-negative integer).

We **proved**: A set of vectors  $S$  spans a vector space  $V$  if and only if  $V$  is the set of all (finite) linear combinations of vectors in  $S$ .

1. **Show:**  $S = \{f_i \mid i \in \mathbb{N}\}$  spans  $V$ .

Vectors  $\alpha_1, \dots, \alpha_n$  in a vector space  $V$  over a field  $\mathbb{F}$  are *linearly dependent* if  $c_1\alpha_1 + \dots + c_n\alpha_n = 0$  where not all  $c_i$ 's are 0 ( $c_i \in \mathbb{F}$ ). If  $S$  is not linearly dependent then it is *linearly independent*.

2. **Show:**  $S = \{f_i \mid i \in \mathbb{N}\}$  is linearly independent.

A *basis* for a vector space  $V$  is a set of linearly independent vectors which spans  $V$ .  $V$  is *finite-dimensional* if it has a finite basis.

3. **Show:**  $S = \{f_i \mid i \in \mathbb{N}\}$  is a basis for  $V$ .

4. **Claim:** if  $V$  is a vector space spanned by vectors  $\beta_1, \beta_2, \dots, \beta_m$ , then any set  $S$  of  $n$  vectors (with  $n > m$ ) is linearly dependent.

5. **Claim:** if  $V$  is a vector space spanned by vectors  $\beta_1, \beta_2, \dots, \beta_m$ , then any independent set of vectors is finite and has no more than  $m$  elements.

A vector space  $V$  with a finite basis is **finite dimensional**.

6. **Claim:** If  $V$  is a finite-dimensional vector space, then every basis has the same number of elements.

The **dimension** of a finite-dimensional vector space  $V$  is the number of elements in any basis of  $V$  and is denoted  $\dim V$ .

7. Find  $\dim \mathbb{R}^2$ .

8. Find  $\dim \mathbb{F}^n$ .

9. Find the dimension of the vector space of polynomials over a field  $\mathbb{F}$  of degree at most 2.
